

Single Tank High-Volume Rack Conveyor Dishwasher - STR

The STR 110 single tank rack conveyor dishwasher delivers the power you need at busy times, and saves energy when it's quiet. With automatic zone activation and variable speed, the STR 110 conveyor system adapts to the quantity of dishes you are washing and provides flexible washing capacity.

- Top quality cleaning results are guaranteed by the perfectly coordinated combination of a powerful pump, five upper and three lower wash arms, optimum water distribution and jets positioned for total coverage.
- With two conveyor speeds the STR 110 can adapt to variable quantities of dishes and to their degree of soiling.
- The option of reducing the rinse temperature to 65° C significantly increases your glassware's service life (optional extra).
- Thanks to its rack-activated zones, the STR 110 adapts to changing volumes automatically which reduces operating costs.
- The clear, colour-coded display prevents operating errors. The wash arms can be removed individually and the filters are easily accessible. This saves time and money.
- The smooth interior door surface and the deep-drawn tank with rounded corners provide no place for dirt and deposits to hide.
- The machine interior is automatically cleaned at the end of each working day. The advanced tank and drain design, combined with the integrated drain pump, ensures that the tank is completely emptied of water.

Theoretical machine output	70/110 Racks/ h
Machine length (mm)	1300
Machine depth (mm)	800
Machine height (mm)	1420
Clear entry width (mm)	510
Clear entry height, max. (mm)	460
Tank temperature	60°C
Rinse water consumption per hour	260 Ltrs/h
Total load	36.5 kW
Water inlet requirements	G ¾"
